Panel Mount Touch Panel PC  
(Windows / Android)

## Why choose Aluminum Alloy Panel Mount Panel PC, Not a Plastic One?

Of course, Plastic Housing saves your budget in the beginning. However, Aluminum Alloy Housing has better heat dissipation capacity and also resilience under static and dynamic. The material gives Panel PCs longer longevity in automatic production lines.

The reason for the features is that Aluminum does not have the problem of brittle fracture and oxidation, so for keeping high efficiency and durability in heavy industries, it is your best choice from seeing the long term, especially in a harsh environment. Not to mention it is non-toxic.

Our new Panel Mount Panel PC - WAM Series from 7 inches to 21.5 inches covering a ratio of 16:9, 5:4, and 4:3 supports Panel Mount and VESA mounting with the CPU ranging from Intel Celeron to Intel Core i7. It also has an Android version to support entry applications.
